APPLICATION AREAS

Product Overview

The OMNI-498 is a dual-band Wi-Fi omni-directional antenna for marine & coastal deployments. The antenna provides dual-band Wi-Fi coverage in the 2.4 GHz and 5 to 7.2 GHz bands, making it ideal for any Wi-Fi access point, whether it is older Wi-Fi technology or new technology that goes up to Wi-Fi 6E (7.2 GHz). The antenna offers 2x2 MIMO capability from its vertically separated radiating elements, allowing for true omni-directional coverage suitable for marine and coastal applications.

The OMNI-498 is purpose-built for harsh environments with an IP 68 protection rating against dust and water ingress, with the antenna being foam filled, making it ideal for the most severe storms at sea. The radome is fully saltwater protected, so it can be used in highly corrosive environments, thanks to the UV stable ASA radome material.

Antenna Performance Plots

VSWR

Voltage Standing Wave Ratio (VSWR)*

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The OMNI-498 delivers superior performance across all bands with a VSWR of <2:1.

**VSWR measured with 2m low loss cable.*

GAIN (EXCLUDING CABLE LOSS)

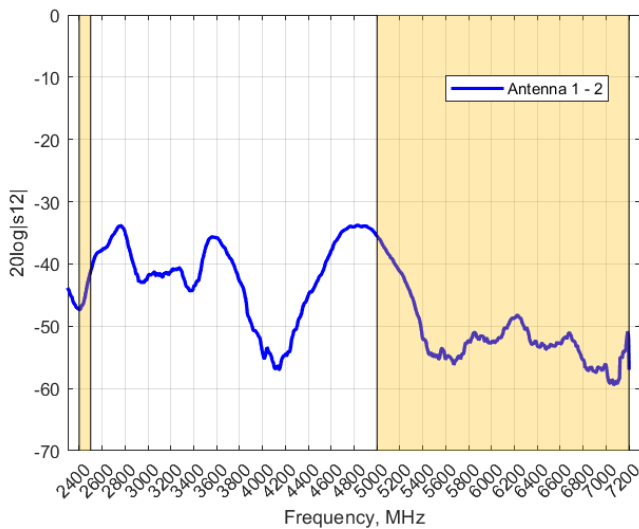

Gain* in dBi

9.8 dBi is the peak gain across all bands

Gain @ 2400 – 2500 MHz:	7 dBi
Gain @ 5000 – 7200 MHz:	9.8 dBi

**Antenna gain measured with polarisation aligned standard antenna*

Isolation

Isolation

Isolation is a measurement of the amount of energy leaked from one port to another. A good isolation is under -20 dB.
